Optimized by **maxim integrated.**
Provide flexibility to system design

Allows 20~35% more modulesper string saving BoS cost

Advanced
Higher power density
Enhanced energy harvest

1500V
Withstand and applicable up to 1500V high system voltage

Reduced shading effect Prevent Hot-spot

Comparing with conventional product, Seraphim integrated cell-string level optimizer into solar panel and redesigned the module. Trying best to provide advaced smart solution to customers, and improve performance &reliability of the solar panels.

Bypass Diodes

Three MPPT smart devices optimize each cell-string individually

VS

Conventional Module   Seraphim MX

Under any condition, the Seraphim MX can optimize power output to enhance energy harvest. However, conventional modules or panel optimizer product will bypass cell-strings When they underperform. So seraphim MX will give higher energy prodution,eliminate hot-spots issues.

Conventional Module or Panel Optimizer
175W=90W+90W-5W

Seraphim MX
225W=90W+90W+45W
Seraphim MX reduces the shading effect significantly, prevents hot-spot formation, and eliminates diode failures. In the meantime, it will lower Operation and Maintenance costs.

Leaf thermal test   IEC hot-spot test   Nearby Shading, Soiling and inter-row shading
Seraphim MX enables flexible PV system design. Best performance with easiest installation.

Combine strings of differentlength
i.e. 10 panels in parallel with 12:
+5% energy increase1

Series connect panels facing different directions
i.e. 10 East panels in series with West panels:
+12% energy increase1

Series connect panels facing different tilts
i.e. 10 panels in series with 25panels:
+1.6% energy increase1
